

## PICK MODULES

---

Pick modules are designed for high volume full and split case picking applications. Modules can be 3-4 levels high, often with conveyors integrated to the rack system. Modules will often incorporate carton flow, pallet flow, pushback and combinations of the above

### **Typical Applications:**

- High volume distribution
- Mail order distribution

### **Advantages:**

- Can handle high SKU counts in small foot print
- Very efficient picking rates
- Can handle both split and full case applications

### **Limitations:**

- High capital investment
- Relatively inflexible to reconfigure
- High conveyerization cost
